

Online Training

Midwest Builders' Casualty offers our policyholders free online safety training courses. The Online Training and Information System (OTIS) is available through our reinsurance partnership with Safety National and enables policyholders to conduct routine safety training, customize curriculum for new hire orientations and prepare the workforce for upcoming projects.

This self-paced, online employee learning management system provides courses that can be assigned to employees or entire departments and enables the employer to track their progress and overall scores. There are over 150 courses included, and many facilitate regulatory requirements. Several of the courses are available in multiple languages, including English.

OTIS provides the site administrator with online tutorials and training, which will insure the product is used effectively to supplement a policyholder's current risk management and safety program. Online safety training can also be a valuable resource for consistent new employee training, as well as addressing seasonal hiring fluctuations. Because the training is not bound by physical location, it can be implemented at individual worksites, field locations or multiple departments within a facility and ensures uniform safety training for workers regardless of location.

- Aerial Lift Safety
- Confined Space Entry
- Crane Safety
- Disaster Readiness
